

This listing of claims will replace all prior versions,
and listings, of claims in the application:

Claims 1-64 (canceled)

1 Claim 65 (new): An image capturing device, comprising:
2 an image capturing unit capturing an image of a
3 subject, and outputting an image signal;
4 an image processing unit obtaining image data in a
5 predetermined format based on the image signal output by
6 the image capturing unit;
7 a setting unit setting an image capturing condition
8 for capturing the image of the subject;
9 a storing unit storing a plurality of pieces of
10 first correction information and a plurality of pieces of
11 second correction information used when a visible image
12 is formed at an external device based on the image data,
13 the first correction information being correction
14 information for correcting the image data at the external
15 device based on the image capturing condition set by the
16 setting unit,
17 the second correction information being correction
18 information for preventing at least a part of a
19 correction process based on the first correction
20 information from being performed when the image data is
21 corrected at the external device based on the first
22 correction information;
23 a selecting unit selecting first correction
24 information corresponding to the image capturing
25 condition set by the setting unit from among the
26 plurality of pieces of first correction information
27 stored in the storing unit; and

28 an outputting unit associating the first correction
29 information selected by the selecting unit corresponding
30 to the image capturing condition and the second
31 information corresponding to the first correction
32 information with image data, and outputting the first
33 correction information and the second correction
34 information in association with the image data to the
35 external device.

1 Claim 66 (new): The image capturing device according to
2 claim 65, wherein
3 the setting unit setting the image capturing
4 condition comprises:
5 a first setting unit selecting one state from a
6 plurality of predetermined shooting states, and setting a
7 predetermined shooting mode; and
8 a second setting unit capable of setting a
9 predetermined correction condition in accordance with a
10 state of a subject regardless of the shooting mode.

1 Claim 67 (new): The image capturing device according to
2 claim 66, wherein
3 a priority in the plurality of shooting modes is
4 assigned to the respective shooting modes set by the
5 first setting unit, and the shooting mode with a high
6 priority is set when the plurality of shooting modes are
7 set prior to shooting.

1 Claim 68 (new): The image capturing device according to
2 claim 66, wherein
3 the shooting mode settable by the first setting unit
4 is one of a scene mode, a filter mode in which sepia or

5 monochrome is settable, a strobe mode, and a view angle
6 mode in which predetermined angle is set, and priority is
7 assigned in the order of the scene mode, the filter mode,
8 the strobe mode, and the view angle mode.

1 Claim 69 (new): The image capturing device according to
2 claim 66, wherein

3 the correction condition set by the second setting
4 unit is one of luminance of scene, subject distance,
5 shutter speed, aperture, strobe, and view angle, and the
6 priority is assigned in the order of the luminance of
7 scene, the subject distance, the shutter speed, the
8 aperture, the strobe, and the view angle.

1 Claim 70 (new): The image capturing device according to
2 claim 65, wherein

3 the setting unit setting the image capturing
4 condition comprises:

5 a first setting unit selecting one state from a
6 plurality of predetermined shooting states, and setting a
7 predetermined shooting mode; and

8 a second setting unit capable of setting a
9 predetermined correction condition in accordance with a
10 state of a subject regardless of the shooting mode, and

11 an item set by the first setting unit is prioritized
12 that an item set by the second setting unit.

1 Claim 71 (new): An image capturing device, comprising:

2 an image capturing unit an image of a subject, and
3 outputting an image signal;

4 an image processing unit obtaining image data in a
5 predetermined format based on the image signal output by
6 the image capturing unit;

7 a setting unit setting an image capturing condition
8 for capturing the image of the subject;

9 a shooting mode selecting unit selecting a mode for
10 shooting from among a plurality of shooting modes;

11 a storing unit storing image forming instruction
12 information used when a visible image is formed at an
13 external device based on the image data, the image
14 forming instruction information stored in the storing
15 unit comprising

16 first correction information for correcting the
17 image data at the external device based on the image
18 capturing condition set by the setting unit,

19 second correction information for correcting the
20 image data at the external device based on the shooting
21 mode selected by the shooting mode selecting unit, and

22 third correction information for preventing at least
23 a part of a correction process on the first correction
24 information and the second correction information from
25 being performed when the image data is corrected at the
26 external device based on the first correction information
27 and the second correction information;

28 a selecting unit selecting the first correction
29 information or the second correction information stored
30 in the storing unit based on the image capturing
31 condition set by the setting unit or the shooting mode
32 selected by the shooting mode selecting unit; and

33 an outputting unit associating one of the first
34 correction information and the second correction
35 information selected by the selecting unit, and the third

36 correction information corresponding to the selected
37 first correction information or second correction
38 information, with the image data, and outputting the
39 first correction information or the second correction
40 information, and the third correction information in
41 association with the image data to the external device.

1 Claim 72 (new): The image capturing device according to
2 claim 71, wherein
3 a priority is assigned to between the image
4 capturing condition set by the setting unit and the
5 shooting mode selected by the shooting mode selecting
6 unit, and the shooting mode is prioritized when the image
7 capturing condition and the shooting mode are
8 simultaneously set and selected.

1 Claim 73 (new): The image capturing device according to
2 claim 72, wherein
3 a priority in the plurality of image capturing
4 conditions is assigned to the respective image capturing
5 conditions set by the setting unit.

1 Claim 74 (new): The image capturing device according to
2 claim 72, wherein
3 a priority in the plurality of shooting modes is
4 assigned to the respective shooting modes selected by the
5 shooting mode selecting unit.

1 Claim 75 (new): The image capturing device according to
2 claim 73, wherein
3 the image capturing condition set by the setting
4 unit is one of luminance of scene, subject distance,

5 shutter speed, aperture, strobe, and view angle, and the
6 priority is assigned in the order of the luminance of
7 scene, the subject distance, the shutter speed, the
8 aperture, the strobe, and the view angle.

1 Claim 76 (new): The image capturing device according to
2 claim 74, wherein

3 the shooting mode set by the shooting mode selecting
4 unit is one of a scene mode, a filter mode in which sepia
5 or monochrome is settable, a strobe mode, and a view
6 angle mode in which predetermined angle is set, and the
7 priority is assigned in the order of the scene mode, the
8 filter mode, the strobe mode, and the view angle.

1 Claim 77 (new): A processing method of an image
2 capturing device, comprising:

3 setting an image capturing condition for capturing
4 the image of a subject;

5 capturing an image of the subject, and outputting an
6 image signal;

7 obtaining image data in a predetermined format based
8 on the image signal;

9 selecting first correction information corresponding
10 to the set image capturing condition from among a
11 plurality of pieces of first correction information
12 stored in a storing unit storing the plurality of pieces
13 of first correction information and a plurality of pieces
14 of second correction information used when a visible
15 image is formed at an external device based on the image
16 data;

17 associating the selected first correction
18 information and the second correction information

19 corresponding to the first correction information with
20 the image data, and outputting the first correction
21 information and the second correction information in
22 association with the image data to the external device,
23 wherein
24 the first correction information is for correcting
25 the image data at the external device based on the set
26 image capturing condition, and
27 the second correction information is for preventing
28 at least a part of a correction process based on the
29 first correction information from being performed when
30 the image data is corrected at the external device based
31 on the first correction information.

1 Claim 78 (new): A processing method of an image
2 capturing device, comprising:
3 selecting a mode for shooting from among a plurality
4 of shooting modes;
5 setting an image capturing condition for capturing
6 the image of the subject;
7 capturing an image of a subject, and outputting an
8 image signal;
9 obtaining image data in a predetermined format based
10 on the image signal;
11 selecting first correcting information or second
12 correction information stored in a storing unit storing
13 the first correction information, the second correction
14 information, and third correction information as image
15 forming instruction information used when a visible image
16 is formed at an external device, based on the set image
17 capturing condition and the selected shooting modes; and

18 associating the selected first correction
19 information or the selected second correction
20 information, and the third correction information
21 corresponding to the selected first correction
22 information or the selected second correction
23 information, with the image data, and outputting the
24 first correction information or the second correction
25 information, and the third correction information in
26 association with the image data to the external device,
27 wherein
28 the first correction information is correcting the
29 image data at the external device based on the set image
30 capturing condition,
31 the second correction information is for correcting
32 the image data at the external device based on the
33 selected shooting mode, and
34 the third correction information is for preventing
35 at least a part a correction process based on the first
36 correction information or the second correction
37 information from being performed when the image data is
38 corrected at the external device based on the first
39 correction information or the second correction
40 information.
